Professional Summary

Senior full-stack engineer with more than 20 years of web development: PHP and Drupal for a long time, then React, TypeScript and Node.js, and four years of enterprise API work in SAP on top.

I work across the whole stack: React and TypeScript frontends, REST APIs, PHP and Node.js backends, relational data models, and the Linux and cloud infrastructure underneath.

My strongest work is modernization: taking an application that has grown for years and rebuilding it into something maintainable, without stopping the business.

Core Strengths

- React, TypeScript and JavaScript on the frontend, including Next.js.
- Backend development with PHP and Node.js, REST API design and integration.
- Relational data modelling in MySQL, MariaDB and PostgreSQL.
- Refactoring and modernization of grown applications, with tests written to protect the change.
- Linux administration, LAMP and cloud infrastructure, Git-based delivery.
- Enterprise integration experience from SAP: OData services, API contracts, hypercare for productive interfaces.
